Special Materials of Construction Available

Specifications Subject to Change Without Notice

---

**Warranty**

Every unit is warranted for two years against defects in material or workmanship. See Owner's Manual for details.

**Distributed by:**

**BABBITT INTERNATIONAL, INC.**

P.O. Box 70094
Houston, Texas USA
Toll-Free: (800) 835-3012 • Local: (719) 467-4436

**APPLICATION PERFORMANCE GUARANTEE:** If within 60 days of purchase, our product does not perform according to our claim and was properly installed in an approved application that does not exceed the stated performance specifications, the unit may be returned for full credit. © 2009 Babbit International Inc. LS 4-Series 06A.
**LS 6000 Level Switch**

**Low Cost, High Performance**

The LS 6000 level switch is an excellent general purpose level control. This unit can sense all liquids and difficult to measure dry materials.

Like all Babitt International level switches, the LS 6000 employs a radio frequency (RF) balanced impedance bridge to sense the presence or absence of products. This technique provides the ability to ignore significant product build-up on the probe and is very stable over wide temperature swings, thus eliminating the need for seasonal recalibration.

All electronics are housed in an explosion proof enclosure and all necessary calibration adjustments and indicators are on-board, so all you need to calibrate the LS 6000 is a small screwdriver.

The probe is very rugged and made of 1/4” diameter 316 stainless steel. If a probe is too long, just cut it off with a saw. Or, if you require a longer probe, simply weld on additional rods. Probes of all lengths are available from the factory.

- Senses Liquid and Dry Materials
- Ignores Significant Product Build-up
- Simple Calibration
- FailSafe Electronics
- 5 AMP, DPDT Relay Output

---

**LS 7000 Level Switch**

**Most Versatile Level Switch Available**

The LS 7000 level switch has all the features and reliability of the LS 6000, plus features that make it the most versatile level control on the market today.

Every standard unit has an on-board fuse and surge suppressor to protect the electronics from improper supply voltages.

A built-in static arrester protects the circuitry from hostile bin environments created by static prone materials such as plastic pellets.

An on-board test switch combined with modular electronics makes troubleshooting and repair a snap. Of course, every unit is backed by our two year warranty.

The time delay allows the user to select ON DELAY or OFF DELAY operation. This timing range is adjustable from 1/8 second to 2 hours. The timer can be used to ignore wave action in a tank, or the timer can be used to pump down a sump with a single probe.

- User Programmable Time Delay
- On-Board Fuse and Spike Suppression
- Built-In Static Protection
- FailSafe High or Low Level
- On-Board Test Switch

---

**LS 8000 Remote Mounted Level Switch**

**Remote Mount the Electronics up to One Mile from the Probe**

The LS 8000 remote mounted level switch is the perfect choice when it is unsafe or inconvenient to mount the electronics directly to the probe.

The probe consists of a maintenance free, epoxy encapsulated transmitter in an explosion proof housing. The transmitter is connected to a receiver with a twisted, shielded pair of wires (Belden 8761 or equal). The receiver board is wired to the supply voltage and has all the necessary calibration adjustments; failsafe and time delay adjustments, and the relay output.

It is possible to calibrate the LS 8000 without climbing a tall tank, or a probe can be located up to one mile from the nearest supply voltage.

The remote mounting does not sacrifice the reliability, stability or performance that makes Babitt International level switches famous.

- Class I, Group C & D; Class II, Group E, F & G
- Inexpensive Interconnected Cable
- FailSafe High or Low Level
- Adjustable Time Delay
- Optional Enclosures for Receiver

---

**Common Features**

- Ignores significant product build-up
- Solid state, no moving parts
- Simple installation and calibration
- Modular electronics easily replaced
- Probe length easily field modified
- Explosion proof housing standard
- Rugged construction handles roughest products
